(54) DOUBLE SIDE SILICONE COATED TAPE AND ITS MANUFACTURE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a double side silicone coated tape and its manufacture wherein non slip properties and sealing properties can be secured more easily by being compared with conventional one, and when peeled off, it can be easily peeled off without leaving a residue of a tacky adhesion layer.

SOLUTION: Silicone layers 2, 2' are formed on both faces of a base material film 1, and a protective film 3 is provided respectively onto the silicone layers 2, 2'. Further, a method for manufacture of a two-side silicone coated tape contains a process wherein silicone resin or rubber composition is applied to one side of the base material film 1 and crosslinked, a process wherein protective films 3, 3' are provided to the formed silicone layers 2, 2', a process wherein silicone resin or rubber composition is applied to the other face of the base material film 1 and crosslinked, and a process wherein the protective film is provided to the formed silicone layers 2, 2'.
